Hook Master Static Track Drag

Features Unparalleled Track Grooming Performance

Hook Master Static Drag

“I can’t Believe How Well this Drag Works....Hands Down Best Drag I've Used”... *Tyler Crossnoe*
“Works like a Dream, it Flattens and Smooths the Surface”... *Jim Hughes*
“This Thing is a Monster”... *Jason Rueckert*

- The Hook Master Track Drag lays down rubber, cleans, conditions while re-exciting the traction compound
- A system of 4 inches wide highly spring loaded fingers apply even down pressure across surface
- Spring Fingers are removable so you can use only the amount of rubber contact and tailor to your current tractor, The Hook Master series allows you to increase the amount of rubber contact as your tractor horsepower increases over time.
- The Hook Master Series is built in several sizes, 84”, 78”, 64” and 48” For tractors from 30 to 116HP
- Unlike other track drags the Hook Master is engineered to provide room for up to 5, 16 inch cut tire sections. Structural supports do not interfere with tire placement and allows mixing tire cut widths to allow 100% rubber contact if desired
- Optional integrated weight bar allows you to place another thousand pounds of "suitcase" weights.
- TVS can supply custom 90 lbs suitcase weights at a less expensive cost than an agricultural store
- Hook Master series drags are sandblasted and attractive, durable epoxy paint is applied.
- Other custom options are available such as traction compound touch-up spray systems mounted to drag and replaceable Teflon finger pads.
- The Hook Master system is built by people who use the drags as part of their everyday business. TVC offers unparalleled customer service
